

EXTRACTHIVE

Bagnols sur Cèze, France

ABOUT

EXTRACTHIVE, is a start-up company that develops technologies and processes for industrial waste treatment and recycling.

Our know-how focuses on chemical and physical approaches. We are able to develop a technology from laboratory to a pilot plant, in connection with our customers' needs.

EXPERTISE

Our main activity is to develop treatment and/or recycling technologies for all actors facing industrial waste management.

Extracting metals from ores or wastes is becoming harder and harder as the resources become more diluted and complex. At EXTRACTHIVE we mobilise our knowledge of pre-treatment, extraction and purification techniques to design and industrialise processes that are technically feasible, economically sound and socially acceptable.

FACILITIES & SERVICES

EXTRACTHIVE is hosted at French Atomic Energy Commission (CEA) site of Marcoule. Our team has priority access to laboratories and the pilot testing platform of the European Hydrometallurgical Institute.

Moreover, we benefit from an access to the analytical facilities of the site (ICP, FX, MEB, MET, DRX).
