

PROMETIA 10th Scientific Seminar

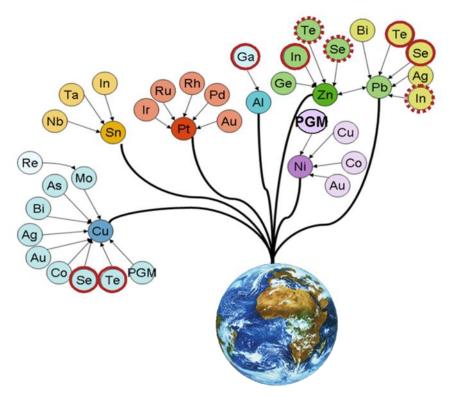

Recycling of man made minerals from the urban mine: challenges and opportunities.

Ir David Bastin

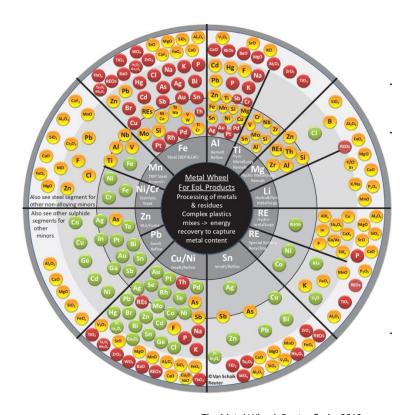

Source: modified from Hagelüken, Meskers in Linkages of sustainability, 2010.

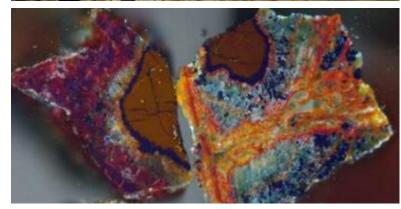

The Metal Wheel, Reuter & al., 2013.

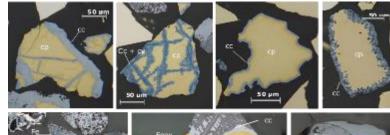

Mineral Processiind and Extractive metallurgy developed for natural metals paragenesis faced with EOL products containing more and more complex elements associations.

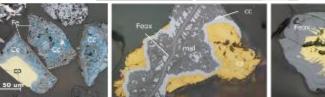

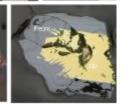

Mining & Urban Mining

Separation and Concentration

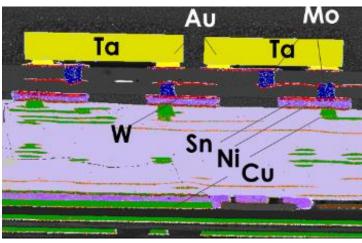

Refining

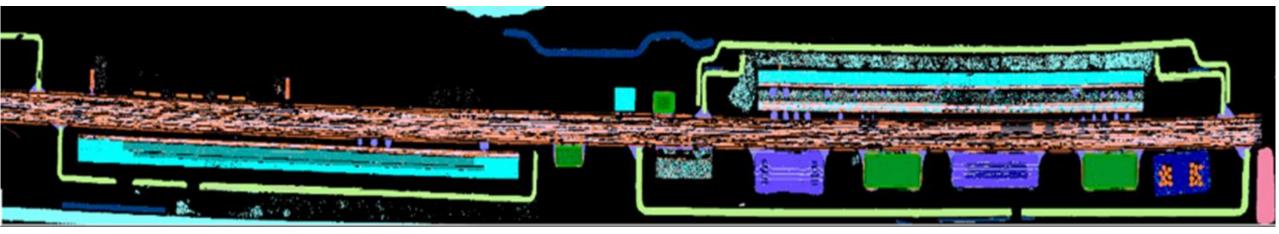

Mining & Urban Mining

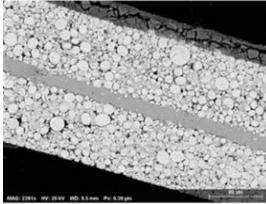

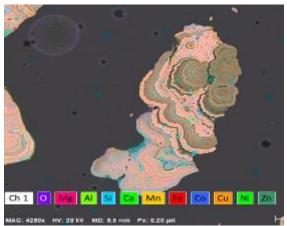

Liberation and Size Reduction

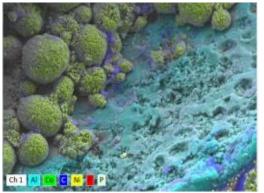

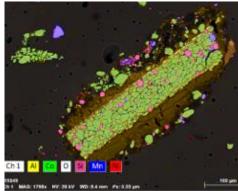

Separation and Concentration

Refining

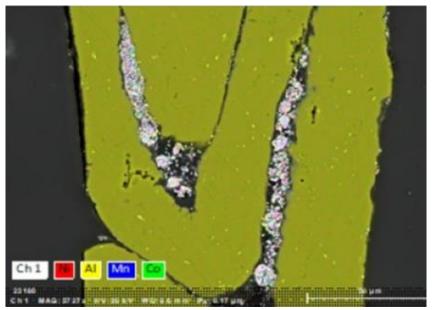

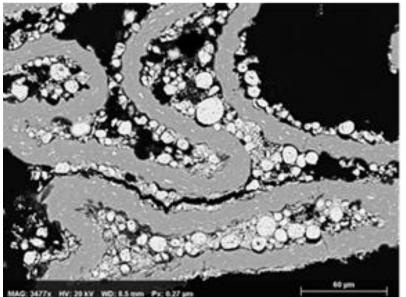

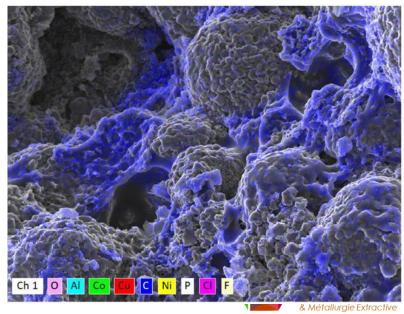

The challenge of liberating ductile and brittle materials binded by polymers

High Voltage Pulse Fragmentation

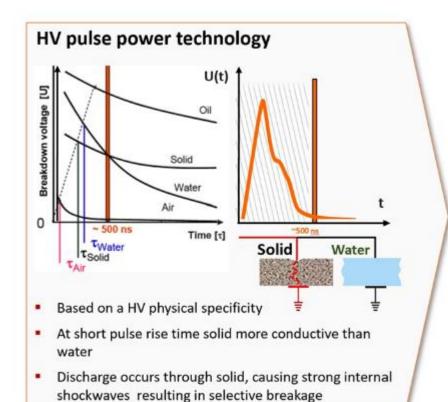

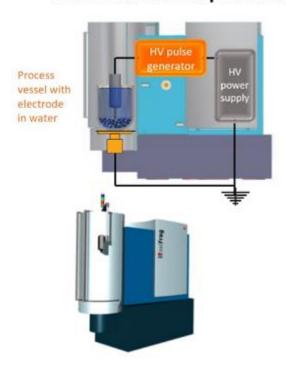

High Voltage Fragmentation

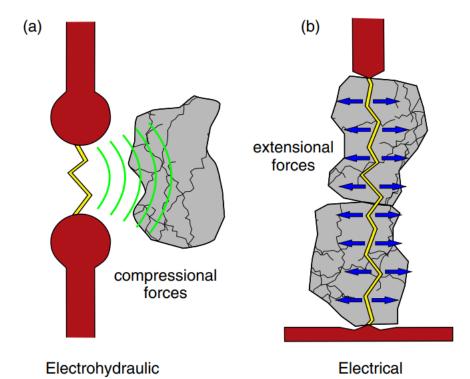

How does HV fragmentation work?

Industrialized and patented

fragmentation

300 pulses

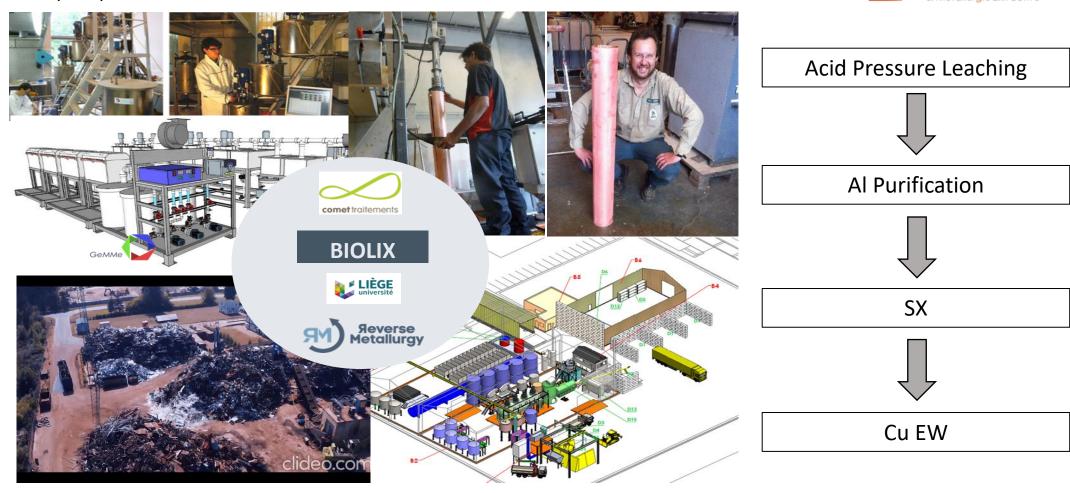

Material after Electric Fragmentation.

The challenge of recovering Cu from WEEE fine shredder residues and dusts. The $[Cu^0 - Al^0 - Organics]$ System.

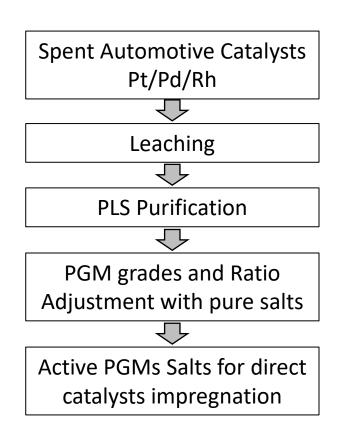

- Leaching of metallic copper
- Al and H₂ generation
- Al precipitation in filtrable form

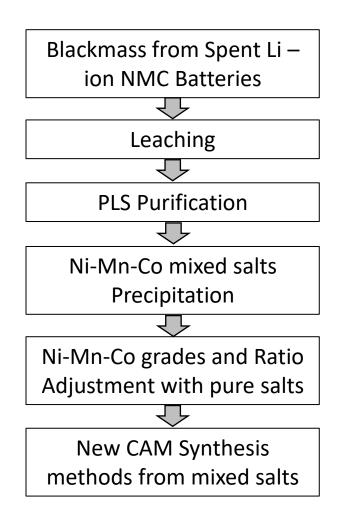

BIOLIX: 14.8 M€ Investment, production of 1500 t/y of copper cathodes, 20 jobs created (yearly metal value > 6 M€).

Man made minerals and the opportunities to shorten the recycling routes.

Increasing the sorted scraps qualities. Keeping the value of alloying elements and shortening remelting operations Going beyond the human eyes.

Alloy 2

Alloy 3

Alloy 10

PICKIT – MULTIPICK: 9.4 M€ Investment – 20 000 t/an de Zorba (Metal value> 30M€/y) – 15 jobs created.

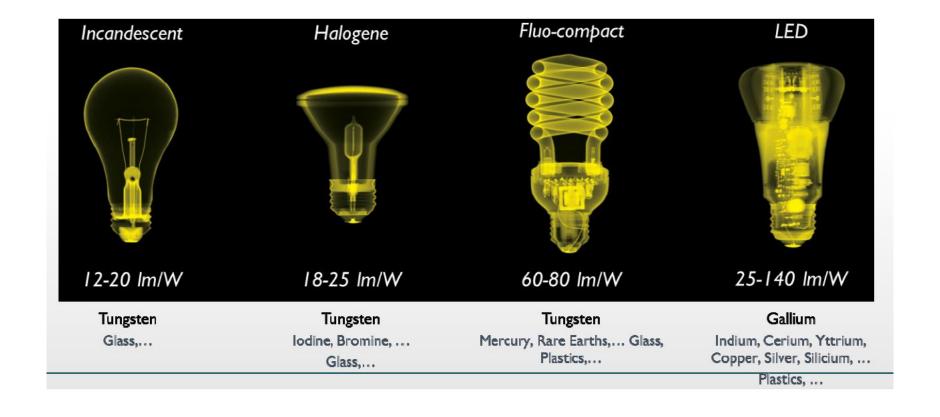

- A better evaluation of the resources and reserves of the urban mine. Support projects quantifying what will never be recycled.
- Make the difference between true recycling and downcycling.
- Close the gap between metallurgy, materials science and products designers.
- Design for Recycling vs Designed from Recycled.
- No sustainable urban mines without primary mining.
- Stop using slogans like Zero Waste, 100 % recycled and carbon neutral.
- We have to think in terms of systems.

Engineering the circular economy of minerals and metals

- 25⁺ Research Staff
- 3 M€ annual turnover

Université de Liège hosts the GeMMe, a Research Unit specialized in georesources, mineral engineering and extractive metallurgy.

The GeMMe contributes to the development of innovative processes for the efficient management of mineral and metallic resources while providing unparalleled upscaling experience in urban ore characterization and processing (with a focus on innovative sorting techniques and hydrometallurgy) derived from a long research tradition in primary ores mining and processing.
